ABSTRACT

A room temperature curable organopolysiloxane composition comprising (A) an organopolysiloxane of 5 $HO(SiR^{1}_{2}O)_{n}H$ and/or $(R^{2}O)_{3-m}R^{1}_{m}SiO(SiOR^{1}_{2}O)_{n}SiR^{1}_{m}(OR^{2})_{3-m}$ wherein R^{1} is a monovalent C1-10 hydrocarbon radical, R^2 is a monovalent C1-6 hydrocarbon radical, n is an integer of at least 10, and m is 0 or 1, (B) a silane compound having at least two hydrolyzable radicals, the remaining radicals 10 being methyl, ethyl, propyl, vinyl or phenyl, and/or a partial hydrolyzate thereof, and (C) an organosilicon compound of $(RO)_pR^1_{3-p}SiR^3-NH-R^4-NH_2$ wherein R^1 and R^2 are as defined above, R^3 is a divalent C1-10 hydrocarbon radical, R^4 is a divalent aromatic ring-bearing C7-10 hydrocarbon radical, and p is 1, 2 or 3, at least one of the NH and NH_2 radicals being not directly attached to the aromatic ring in R^4 , cures into silicone rubber which has improved adherence even upon exposure to hot steam.
